

## SIMPLE STATISTICAL TESTS FOR GEOGRAPHY

When Columbine had finally run the gamut of all her feelings, which included fear, anger, joy, pain, and an abiding and entirely unreasoning sense of dread, she thanked him, gave him her address and phone number, and said to get hi touch in January for his endorsement. Rubbing his head more savagely than ever on the lintel, as if to rip off his thoughts with his hide, "Look at it, Matt. Really look at it." So he did, feeling foolish, wondering what the joke was. He. "Done!" I heard the typewriter stop ticking and the scrape of a chair being scooted back. I didn't hear Oregon, who still can't remember the blocking for Lovely to Look At, which she has been dancing since. Congreve's voice warmed to his theme, and his manner became more urgent and persuasive. "Developments in genetic engineering and embryology make it possible to store human genetic information in electronic form in the ship's computers. For a small penalty in space and weight requirements, the ship's inventory could be expanded to include everything necessary to create and nurture a first generation of, perhaps, several hundred fully human embryos once a world is found which meets the requirements of the preliminary surface and atmospheric tests. They could be raised and tended by special-purpose robots that would have available to them as much of the knowledge and history of our culture as can be programmed into the ship's computers. All the resources needed to set up and support an advanced society would come from the planet itself. Thus, while the first generation was being raised through infancy in orbit, other machines would establish metals- and materials-processing facilities, manufacturing plants, farms, transportation systems, and bases suitable for occupation. Within a few generations a thriving colony could be expected to have established itself, and regardless of what happens here the human race would have survived. The appeal of this approach is that, if the commitment was made now, the changes involved could be worked into the existing schedule for SP3, and launch could still take place in five years as projected. I enjoyed them so much I'd bought my own wetsuit But I didn't enjoy it nearly as much as I did Saturday. Pretend then. And don't make it anything flip like that last one. Why would anyone deliberately and brutally murder. She got up without disturbing him and went to the cupboard where she found a white linen towel. She washed the wound with water. The cut was long but it was not deep. Some scratch got in the woods perhaps. She knew it would heal before morning. So she lay down beside him and fitted her body to his. Brother Hart stirred slightly but did not waken. Then Hinda, too, was asleep. The knife turned toward her own chest. Selene's hand leaped to Intercept, closing on Amanda's wrist Amanda screamed inarticulately. Her whole body convulsed with the effort to tear loose. Selene held on. Slowly, Selene twisted the wrist back and down while the poly around them swirled in wave after wave of color pulsating with every labored breath of the struggling body. The maelstrom spread out across the floor and up the walls, even affected the chairs so that they, too, raged with color and pulsed to ? the time of Amanda's breathing. The answer is that though all the genes are there in every cell of your body, they aren't all working." "You have come," she said, and her voice trembled. After all, a human being is more than his genes. Your clone is the result of your nucleus being placed into a foreign egg cell and the foreign cytoplasm in that egg cell will surely have an effect on the development of the clone. The egg will have to be implanted into a foreign womb and that, too, will have an influence on the development of the organism. Amanda, too, seemed to think going to Gateside was more trouble than she was worth, but I had my. First Ace printing: November 1981 Published Simultaneously in Canada. Hinda could not answer. Even Hidalgo, the woman who owned the tavern and took no man's jabbering seriously, was leaning her elbows on the counter and listening with opened mouth. How Swyley did what only he did so well was something nobody was quite sure of, least of all Swyley himself. Whatever the reason, Swyley's ability to pick out significant details from a hopeless mess of background garbage and to distinguish consistently between valid information and decoys was justly famed and uncanny. But since Swyley himself didn't understand how he did it, he was unable to explain it to the systems programmers, who had hoped to duplicate his feats with their image-analysis programs. That had been when the "-sits" and the "-zoologists" began their endless batteries of fruitless tests. Eventually Swyley made up plausible-sounding explanations for the benefit of the specialists, but these were exposed when the programs written to their specifications failed to work. Then Swyley began claiming that his mysterious gift had suddenly deserted him completely. the washroom, kneels beside the toilet and vomits. "We were provided for," Mary Lang said quietly.
